WEB-ABL ACTIVITY

1.COLLEGE EVENT INVITATION WEBPAGE

1. Introduction

The College Event Invitation webpage is designed using HTML and CSS to invite students to a college cultural festival. The webpage provides information about the event date, time, venue, activities, and instructions. It has a simple and attractive design that helps students understand the event details easily.

2. Objectives

- To design a college event invitation webpage using HTML and CSS.
- To display the event date, time, and venue.
- To present the activities and instructions clearly.
- To learn how to use HTML elements and CSS styling.
- To create a user-friendly and attractive webpage.

3. Website Features

The webpage includes the following features:

- **Event Title:** Displays the heading "College Cultural Fest 2026".
- **Invitation Message:** Shows the message "You Are Invited!"
- **Event Image:** Displays a colorful festival image.
- **Event Details:** Provides the date, time, and venue.
- **About the Event:** Describes the cultural festival.
- **Activities:** Lists dance, singing, fashion show, quiz, and fun games.
- **Instructions:** Displays important rules for participants.
- **Join Button:** Provides a button labeled "Join the Celebration".

4. Technologies Used

HTML (HyperText Markup Language):

HTML is used to create the structure and content of the webpage. It displays headings, paragraphs, images, lists, and links.

CSS (Cascading Style Sheets):

CSS is used to design the webpage by adding colors, borders, spacing, image sizes, and button styles.

Web Browser:

Google Chrome is used to open and view the webpage.

Text Editor:

Notepad or Visual Studio Code can be used to write and save the HTML and CSS code.

5. Important HTML Elements

The following HTML elements are used in the webpage:

- `<html>` – Defines the HTML document.
- `<head>` – Contains webpage information and the CSS link.
- `<title>` – Sets the title displayed in the browser tab.
- `<body>` – Contains the visible webpage content.
- `<div>` – Groups related content into sections.
- `<h1>` and `<h2>` – Display the main heading and subheadings.
- `<p>` – Displays paragraphs and event information.
- `<img>` – Displays the festival image.
- `<b>` – Makes important text bold.
- `<ul>` and `<li>` – Display activities as an unordered list.
- `<ol>` and `<li>` – Display instructions as a numbered list.
- `<a>` – Creates the "Join the Celebration" link.
- `<link>` – Connects the external CSS file to the HTML document.

6. CSS Styling and Designing

CSS is used to make the webpage attractive and organized.

- **Font Family:** Arial is used for clear and readable text.
- **Background Color:** A light blue-gray background is applied to the page.
- **Invitation Container:** A white container with a navy border holds the content.
- **Heading Colors:** Dark blue is used for the main heading, and dark red is used for subheadings.
- **Image Styling:** The festival image is displayed with a suitable height and rounded corners.
- **Details Section:** A light blue background highlights the event information.
- **Lists:** Activities and instructions are aligned to the left for readability.
- **Button Styling:** The invitation link has a navy background, white text, and rounded corners.
- **Hover Effect:** The button changes color when the user moves the mouse over it.

7. Development Process

The webpage is developed through the following steps:

1. Create an HTML file named `index.html`.
2. Write the basic HTML structure.
3. Add the event title, invitation message, image, and event details.
4. Add the activities and instructions using lists.
5. Create a CSS file named `itcse.css`.
6. Apply colors, fonts, borders, spacing, and image styling.
7. Link the CSS file to the HTML file.
8. Save both files in the same folder.
9. Open `index.html` in Google Chrome.
10. Check the output and take a screenshot of the completed webpage.

8. Advantages

- The webpage is simple and easy to understand.
- Event information is displayed clearly.
- HTML and CSS make the webpage attractive.

- The design helps students find important event details quickly.
- The webpage can be opened in a modern web browser.
- The code can be edited easily to update event information.

9. Limitations

- The webpage is static and does not store user information.
- The "Join the Celebration" link does not perform registration because it uses `href="#"`.
- There is no online registration form.
- The webpage does not include a database.
- The festival image requires an internet connection to load from its external source.
- Event details must be changed manually in the HTML code.

10. Future Improvements

- Add an online registration form for participants.
- Connect the registration form to a database.
- Add a countdown timer for the event.
- Include contact details of the event organizers.
- Add more images and videos of festival activities.
- Improve the webpage with responsive design for mobile phones and tablets.
- Connect the "Join the Celebration" button to a working registration page.
- Add JavaScript for interactive features.

11. Conclusion

The College Event Invitation webpage was designed successfully using HTML and CSS. It presents the cultural festival details, activities, instructions, and invitation message in a clear and attractive format. This experiment helped in understanding basic HTML elements, CSS styling, webpage structure, and the process of developing a simple website. The webpage can be improved further by adding interactive features and an online registration system.

About the Event

Join us for a wonderful cultural fest filled with music, dance, fun, creativity, and entertainment.

Activities

- Dance Competition
- Singing Competition
- Fashion Show
- Quiz Competition
- Fun Games

Instructions

1. Bring your college ID card.
2. Arrive before 9:30 AM.
3. Maintain discipline.
4. Follow the organizers' instructions.

Come and celebrate with us!

Join the Celebration

EXPERIMENT 2: STUDENT INFORMATION CARDS

1. Introduction

The Student Information Cards webpage is designed using HTML and CSS to display student details in separate cards. Each card contains the student's name, roll number, course, and a short description. The webpage uses different CSS properties to arrange the cards and make them attractive and easy to read.

2. Objectives

- To design a webpage using HTML and CSS.
- To display student information in separate cards.
- To learn how to use HTML elements such as headings, paragraphs, and divisions.
- To understand CSS properties such as color, border, padding, and margin.
- To arrange multiple cards horizontally on a webpage.

3. Website Features

The webpage includes the following features:

- **Main Heading:** Displays the title "Student Information Cards".
- **Student Cards:** Displays three separate student information cards.
- **Student Details:** Shows the name, roll number, course, and description of each student.
- **Background Color:** Uses a light blue background for the cards.
- **Border:** Uses a navy-colored border around each card.
- **Card Layout:** Arranges the cards side by side using the `inline-block` property.
- **Text Formatting:** Uses bold text to highlight labels such as Name, Roll Number, and Course.
- **Spacing:** Uses padding and margin to provide space inside and outside the cards.

4. Technologies Used

HTML (HyperText Markup Language):

HTML is used to create the structure of the webpage. It displays the main heading, student cards, names, roll numbers, courses, and descriptions.

CSS (Cascading Style Sheets):

CSS is used to style the student cards by adding background colors, borders, spacing, text alignment, and layout properties.

Web Browser:

Google Chrome is used to open and view the webpage.

Text Editor:

Notepad or Visual Studio Code is used to write and edit the HTML and CSS code.

5. Important HTML Elements

The following HTML elements are used in this webpage:

- `<html>` – Defines the HTML document.
- `<head>` – Contains the title and style information.
- `<title>` – Sets the title displayed on the browser tab.
- `<style>` – Contains the internal CSS code.
- `<body>` – Contains the visible webpage content.
- `<center>` – Centers the main heading in this example. (This element is obsolete in HTML5; CSS is recommended instead.)
- `<h1>` – Displays the main heading.
- `<h2>` – Displays the heading of each student card.
- `<div>` – Creates separate containers for the student cards.
- `<p>` – Displays student information in paragraphs.
- `<b>` – Makes labels bold, such as Name and Roll Number.

6. CSS Styling and Designing

CSS is used to make the student information cards attractive and properly arranged.

- **Width:** Sets the width of each card to 250 pixels.
- **Height:** Sets the height of each card to 250 pixels.
- **Background Color:** Applies a light blue background to each card.
- **Border:** Adds a 2-pixel solid navy border.
- **Padding:** Adds 15 pixels of space inside each card.
- **Margin:** Adds 10 pixels of space outside each card.
- **Display:** The `inline-block` property arranges cards side by side when sufficient space is available.
- **Vertical Alignment:** The `vertical-align: top` property aligns the tops of the cards.
- **Box Sizing:** The box`-sizing: border-box` property includes padding and borders within the specified card dimensions.

Note: The CSS selectors `.h2`, `.p`, `.h1`, and `.bdy` in the provided code are class selectors. They will not style ordinary `<h2>`, `<p>`, `<h1>`, and `<body>` elements unless those elements have the corresponding class names. Use `h2`, `p`, `h1`, and `body` as element selectors when you want to style those elements directly.

7. Development Process

The webpage is developed using the following steps:

1. Open a text editor such as Notepad or Visual Studio Code.
2. Create a new HTML file.
3. Write the basic HTML structure.
4. Add the main heading "Student Information Cards".
5. Create three `<div>` elements with the class name `card`.
6. Add the name, roll number, course, and description of each student.
7. Write CSS inside the `<style>` element.
8. Apply background colors, borders, padding, margins, and layout properties.
9. Save the file with the `.html` extension.
10. Open the HTML file in Google Chrome and check the output.

8. Advantages

- Student information is displayed clearly.
- Multiple students can be displayed on one webpage.
- The card layout is simple and easy to understand.
- CSS makes the cards attractive.
- Student details can be updated easily.
- The experiment helps beginners understand HTML and CSS.
- The cards can be reused for displaying other types of information.

9. Limitations

- The webpage displays only static student information.
- Student details must be changed manually in the HTML code.
- There is no database to store student records.
- The webpage does not provide search or filtering options.
- The fixed card dimensions may not suit all screen sizes or longer descriptions.
- The design does not include interactive features.

10. Future Improvements

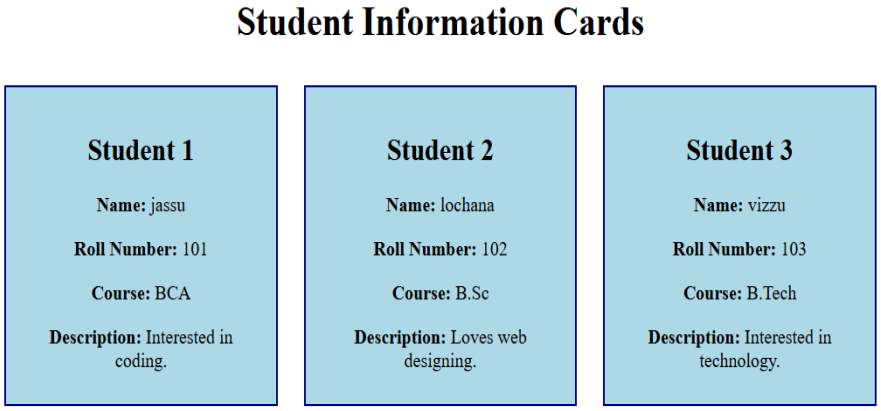

- Add responsive design for mobile phones, tablets, and computers.
- Add student profile photographs.
- Use JavaScript to search and filter student cards.
- Add buttons to view more student details.
- Connect the webpage to a database to store student information.
- Add a form to enter new student details.
- Improve the design with hover effects, shadows, and rounded corners.
- Use external CSS to separate the design from the HTML structure.

11. Conclusion

The Student Information Cards webpage was created using HTML and CSS to display information about three students in separate cards. The experiment helped in understanding HTML elements, CSS selectors, borders, background colors, padding,

margins, and card layout. It also demonstrated how multiple information cards can be arranged on a webpage. The webpage can be improved further by adding responsive design, student photographs, search options, and database connectivity.

12.Output Screenshot

EXPERIMENT 3: SEMINAR REGISTRATION 2026 – EVENT WEBSITE

1. Introduction

The Seminar Registration 2026 website is designed using HTML and CSS to provide information about a college technology fest. The website displays event themes, keynote speakers, the session schedule, venue details, registration form, and participation guidelines. It provides a simple and organized way for students to learn about the event and register their interest.

2. Objectives

- To design an attractive event website using HTML and CSS.
- To display seminar details, including the date, time, and venue.

- To present event themes and speaker information.
- To create a session schedule for participants.
- To design a registration form using HTML form elements.
- To learn navigation links and CSS layout techniques.
- To understand responsive web design for different screen sizes.

3. Website Features

The website includes the following features:

- **Navigation Bar:** Provides links to Themes, Speakers, Schedule, Venue, and Registration sections.
- **Hero Section:** Displays the main heading "Innovate. Create. Inspire." and event details.
- **Event Themes:** Shows Artificial Intelligence, Web Development, and Cybersecurity.
- **Keynote Speakers:** Displays the names, professions, and topics of three speakers.
- **Session Schedule:** Presents the event timetable from registration to the closing ceremony.
- **Venue Information:** Displays the auditorium name, address, date, time, and facilities.
- **Registration Form:** Collects the participant's name, email address, college name, area of interest, and additional information.
- **Participation Guidelines:** Lists the rules and instructions for participants.
- **Footer:** Displays the event name, slogan, contact email, and copyright information.
- **Responsive Design:** Adjusts the layout for different screen sizes using CSS media queries.
- **Hover Effects:** Changes link and button colors and adds movement to cards when the user hovers over them.

4. Technologies Used

HTML (HyperText Markup Language):

HTML is used to create the structure of the website. It defines navigation links, headings, paragraphs, theme cards, speaker details, the session schedule, venue information, registration form, and footer.

CSS (Cascading Style Sheets):

CSS is used to design the website. It controls colors, fonts, spacing, borders, buttons, card layouts, form styling, hover effects, and responsive behavior.

Google Chrome:

Google Chrome is used to open and test the website.

Text Editor:

Notepad or Visual Studio Code can be used to write and edit the HTML and CSS files.

5. Important HTML Elements

The following HTML elements are used in the website:

- `<html>` – Defines the HTML document.
- `<head>` – Contains metadata, title, and CSS file reference.
- `<meta>` – Specifies character encoding and viewport settings.
- `<title>` – Defines the browser tab title.
- `<link>` – Connects the external CSS file named `bomma.css`.
- `<body>` – Contains the visible website content.
- `<nav>` – Defines the navigation section.
- `<header>` – Defines the introductory hero section.
- `<section>` – Groups related website content.
- `<h1>`, `<h2>`, and `<h3>` – Display headings and subheadings.
- `<p>` – Displays paragraphs and event descriptions.
- `<div>` – Groups content into cards, schedule rows, and other containers.
- `<a>` – Creates navigation links and registration buttons.
- `<strong>` – Highlights important information, such as session times.
- `<form>` – Creates the registration form.
- `<label>` – Identifies form fields.
- `<input>` – Accepts text, email, and checkbox input.
- `<select>` and `<option>` – Allow users to choose their area of interest.
- `<textarea>` – Accepts additional information.
- `<button>` – Creates the registration submission button.

- `<ul>` and `<li>` – Display participation guidelines as a list.
- `<footer>` – Displays contact information and copyright details.

6. CSS Styling and Designing

CSS is used to make the event website visually attractive and user-friendly.

- **Universal Selector (*):** Resets margins and padding and applies `box-sizing: border-box`.
- **Font Styling:** Uses Arial for clear and readable text.
- **Background Colors:** Uses light colors for the page and sections and dark navy for the navigation bar and footer.
- **Navigation Bar:** Uses Flexbox to arrange the navigation content and links.
- **Hero Section:** Uses a linear gradient background, white text, centered alignment, and large padding.
- **Buttons:** Uses background colors, padding, rounded corners, bold text, and hover effects.
- **Grid Layout:** Uses CSS Grid to arrange the theme and speaker cards in columns.
- **Card Design:** Uses white backgrounds, rounded corners, shadows, and hover animations.
- **Session Schedule:** Uses a grid layout to separate session times from descriptions.
- **Venue Box:** Uses a dark background, white text, and padding to highlight venue information.
- **Form Styling:** Uses borders, padding, rounded corners, and focus outlines to improve form appearance.
- **Participation Guidelines:** Uses a white container, spacing, and list formatting.
- **Responsive Design:** Uses `@media` queries to change the number of card columns and adjust text, navigation, schedule, and form layouts on smaller screens.
- **Smooth Scrolling:** Uses `scroll-behavior: smooth` to make navigation between page sections smoother.

7. Development Process

The website is developed using the following steps:

1. Open a text editor such as Notepad or Visual Studio Code.

2. Create an HTML file and name it `index.html`.
3. Write the basic HTML document structure.
4. Add the navigation bar and hero section with the event title and details.
5. Create sections for event themes and keynote speakers.
6. Add the session schedule and venue information.
7. Create the registration form using labels, inputs, a dropdown list, a textarea, and a checkbox.
8. Add the participation guidelines and footer.
9. Create a CSS file named `bomma.css`.
10. Apply colors, fonts, spacing, grids, buttons, shadows, and hover effects.
11. Add media queries to make the website responsive.
12. Link `bomma.css` to the HTML file using the `<link>` element.
13. Save both files in the same folder.
14. Open `index.html` in Google Chrome and check the website layout and navigation.
15. Test the form fields and take screenshots of the completed website.

8. Advantages

- Displays all important event information in one place.
- Provides easy navigation between different sections.
- Presents themes, speakers, and schedules in an organized format.
- Includes a registration form for collecting participant details.
- Uses CSS Grid and Flexbox for an organized layout.
- Responsive design improves usability on smaller screens.
- Hover effects make the website more interactive.
- HTML and CSS make the website easy to maintain and customize.

9. Limitations

- The website does not have a database to store registration details.
- The registration form does not currently have JavaScript or backend processing to submit and save information.
- The element with the ID `formMessage` does not display a success message because no form-submission script is provided.
- There is no automatic email confirmation after registration.
- The website does not include an online payment facility.

- Speaker information and event details must be updated manually in the HTML code.
- The navigation links work only for sections that have matching IDs. The Participation Guidelines section does not currently have a link in the navigation bar.

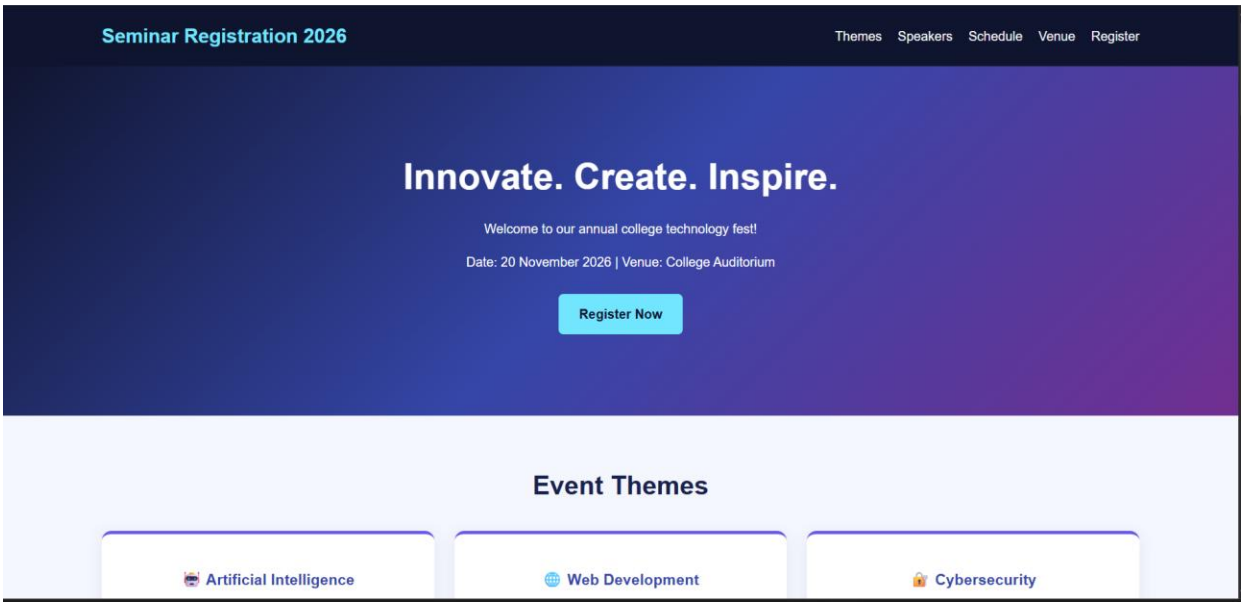

10. Future Improvements

- Add JavaScript validation and a registration confirmation message.
- Connect the registration form to a backend server and database.
- Send confirmation emails to registered participants.
- Add speaker photographs and biographies.
- Include a countdown timer for the event.
- Add a map to help participants locate the venue.
- Provide a downloadable event schedule.
- Add search and filtering features for event sessions.
- Improve accessibility with clear labels, keyboard navigation, and appropriate color contrast.
- Add a login system for participants and organizers.
- Include event feedback and certificate-download options.

11. Conclusion

The Seminar Registration 2026 website was designed using HTML and CSS to present college technology fest information in an organized and attractive manner. It includes navigation links, event themes, keynote speakers, a session schedule, venue details, a registration form, participation guidelines, and a footer. This experiment helped in understanding semantic HTML elements, CSS Grid, Flexbox, form design, hover effects, and responsive web design. The website can be enhanced further by adding JavaScript functionality, backend processing, database connectivity, and email confirmation.

Topic: Digital Safety

Session Schedule

09:00 AM	**Registration and Welcome**	Participant check-in and welcome refreshments.
09:30 AM	**Opening Ceremony**	Welcome address and keynote speech.
10:30 AM	**Web Development Workshop**	Hands-on website development session.
11:30 AM	**Cybersecurity Session**	Learn about online threats and security.
12:30 PM	**Lunch Break**	Lunch and networking.
01:30 PM	**Innovation Challenge**	Team activities and project presentations

Venue Information

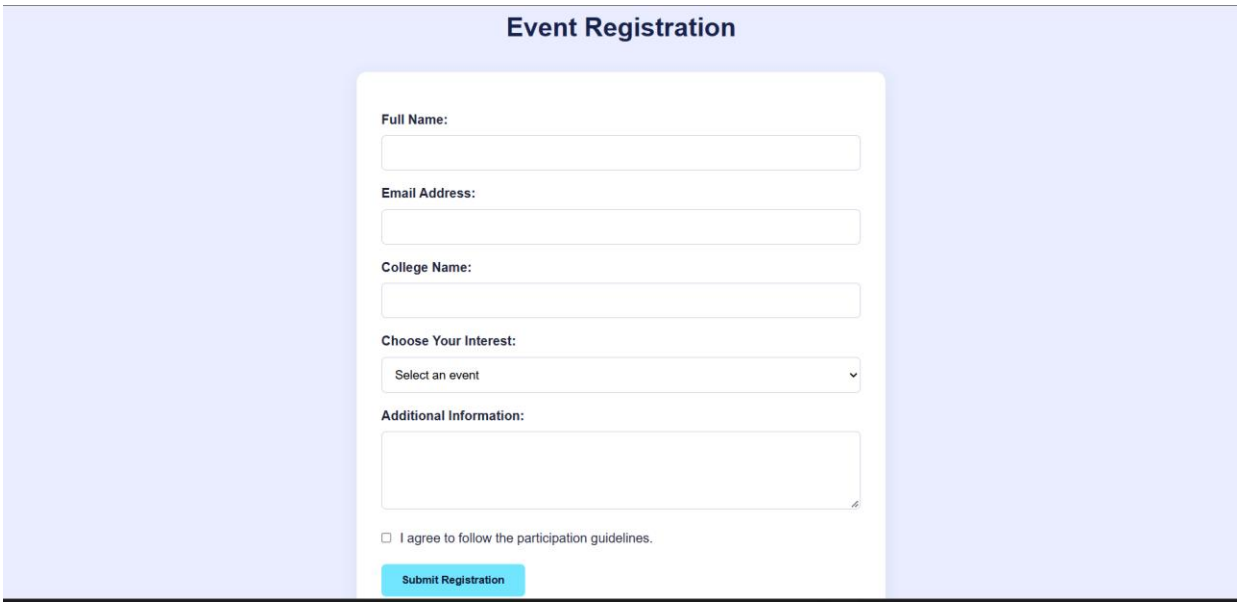

College Main Auditorium

Address: TechNova College Campus, Main Block

Date: 20 November 2026

Time: 9:00 AM to 4:00 PM

Facilities: Auditorium, workshop rooms and refreshments.

Participation Guidelines

- Register using accurate personal information.
- Arrive at least 15 minutes before the session.
- Carry your college ID card.
- Respect speakers and other participants.
- Follow workshop instructions and safety rules.
- Obtain permission before recording speakers.
- Submit original work for competitions.
- Follow the event schedule and organizer instructions.
